**Subject: Announcement EMEA AP400 List Price increase**

Dear Valued NEC Partner,

As a direct result of shortage of components on the global semiconductor market, our NEC DECT AP400 base station production line has been confronted with a supply stop of core Integrated Circuits.

The good news is that we have managed to safeguard the ongoing production and supply of the AP400 base stations by purchasing these core components on the market, however at significantly higher cost.

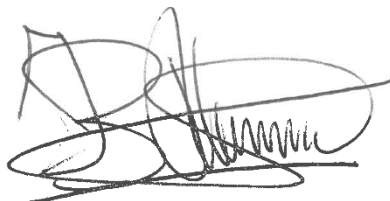

As a consequence, NEC is forced to increase the MSRP's of the AP400 series.

NEC will implement a 17% MSRP price increase on all AP400 models.  
This price increase will take effect as per 1 March 2022.

As soon as the supply of the related integrated circuits is back to normal operation and prices, the MSRP will be aligned with that situation.

For any questions related to the above, please feel free to reach out to your NEC Account Manager.

Yours sincerely,

Bert Plasman  
Vice President Sales  
EMEA NEC Enterprise  
Solutions
